back

Autocomplete

- Similar to closed system like Dropbox, Basecamp or Google Drive
- Only looks at people in immediate network: users of same datasets, members and teams from your organizations, and your organizations.
- When clicked, a list of the user's teams and the Org name (which means share with all org members) show up. When user types the first character, the list disappears, then at two characters, the system finds and displays matching usernames, real names and email addresses for people and user teams, organization teams and the Org name.
- Suggestion list differentiates people vs. org vs team via visuals (css)
- For people outside of user's network, just send emails and if the email matches something in the system, it can match it up OR the browser will know via the link in the email.
